The Batch 2020
Regular Season Statistical Analysis

In order to develop a sense of the "luck" associated with fantasy football this year, a computation was developed to visualize head-to-head scoring vs weekly "doubleheader" scoring. For each team, the plots below show one point per regular season matchup week plotted along 2 axes.

- On the Y-axis: (your score) - (opponent score)
    - Positive values indicate a **head-to-head win** (top half of the plot)
    - Negative values indicate a **head-to-head loss** (bottom half of the plot)

- On the X-axis: (your score) - (median number of points across the league for that week)
    - Positive values indicate a **weekly points win** (right half of the plot)
    - Negative values indicate a **weekly points loss** (left half of the plot)

A "**lucky win**" occurs when you win your head-to-head matchup but score in the bottom half of the league.
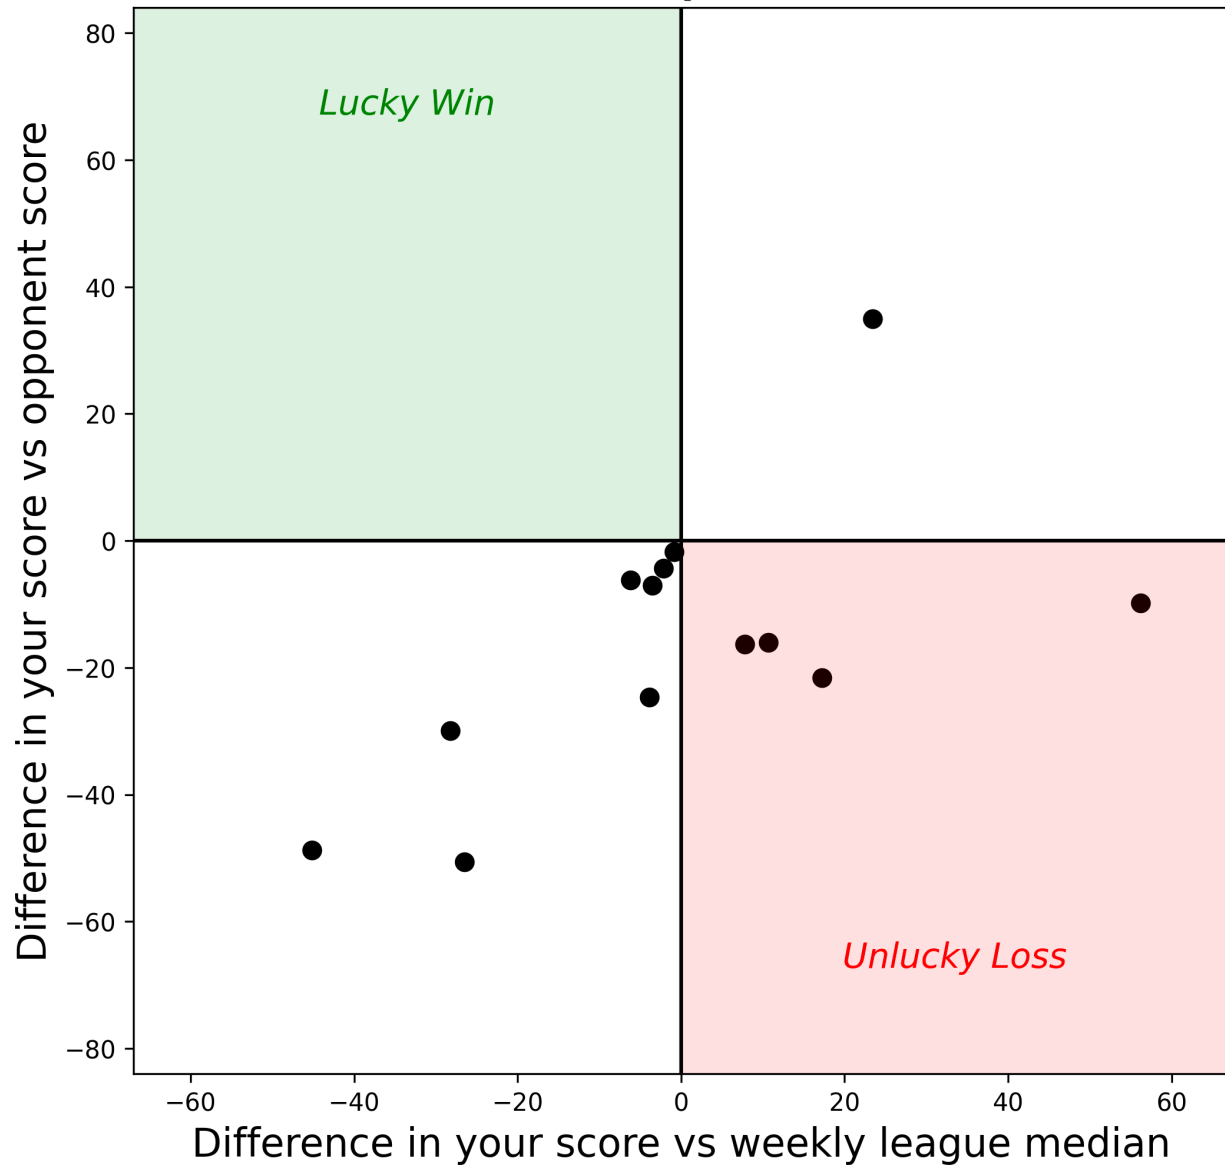

An "**unlucky loss**" occurs when you lose your head-to-head matchup but score in the top half of the league.

The code used to generate this report can be found here.
